

METHOD FOR THE PREPARATION OF 1-BENZOTRIAZOLYL CARBONATE
ESTERS OF POLY(ETHYLENE GLYCOL)

ABSTRACT OF THE DISCLOSURE

5

10 The invention provides a method for preparing a 1-benzotriazolylcarbonate ester of a water-soluble and non-peptidic polymer by reacting a terminal hydroxyl group of a water-soluble and non-peptidic polymer with di(1-benzotriazolyl)carbonate in the presence of an amine base and an organic solvent. The polymer backbone can be poly(ethylene glycol). The 1-benzotriazolylcarbonate ester can then be reacted directly with a biologically active agent to form a biologically active polymer conjugate or reacted with an amino acid, such as lysine, to form an amino acid derivative.
